Outcomes

Focus area 1
Implementation of integrated community case management

- Increased reporting of community data
  - 88.0% in 2022 vs 60.4% in 2021
- Capacity development
  - 573 community health workers trained
  - 12,047 private health facilities reporting per quarter

Focus area 2
Community engagement and social and behaviour change communication

- 6,280 community leaders engaged to promote best practices in malaria prevention and management
- 225 peer educators trained
- 150 volunteers trained

Focus area 3
Private sector engagement

- 289 private health centres
- 159 private health facilities
- 203 pharmacy stores
- Increased private sector reporting

Focus area 4
School health programme

- 1,321 school health providers engaged
- 819 schools reporting
- 259,432 nets distributed to school children

Outcomes

Malaria and other common childhood illnesses, such as pneumonia and diarrhoea, are among the leading causes of illness and death in Uganda. These preventable diseases are particularly dangerous to children under five.

In an effort to accelerate progress towards elimination of these illnesses, the Supporting Uganda’s Malaria Reduction and Elimination Strategy (SUMRES) project is establishing an integrated community case management (ICCM) programme in the districts of Lango and Acholi. SUMRES is supporting the implementation of ICCM to improve access to care and treatment for children under five.

Activities and outcomes highlight our achievements in year 1 of implementation.

Organisation, SUMRES is delivering key interventions to approximately 2.8 million individuals. The following activities and outcomes highlight our achievements in year 1 of implementation.

- School health programme
  - 1,321 school health providers engaged
  - 819 schools reporting
  - 259,432 nets distributed to school children
